

A Rear-Window-Mounted COB Warning Light

Safely Embedded Inside Laminated Glass

Introducing a Next-Generation Patented In-Glass COB Emergency Warning System for OEM Integration

Dear Business Partners,

We are proud to present an advanced patented automotive safety innovation, purpose-built for OEM integration — the In-Glass COB Emergency Warning Triangle System.

This cutting-edge system is permanently embedded within the laminated rear windshield, allowing drivers to activate high-intensity strobe warning lights — a central COB triangle and dual upper-corner flashers — directly from inside the vehicle.

By eliminating the need for drivers to exit the car during hazardous roadside situations, this technology dramatically enhances visibility and roadside safety — ensuring recognition from up to 100 meters away, even in poor weather or low-light conditions.

Key features

- Fully integrated COB triangle and dual strobe lights engineered into the rear windshield
- Driver-controlled operation from the cabin — no need to exit the vehicle
- Ultra-bright COB strobe visibility ideal for emergencies or breakdowns
- Seamless OEM integration for new and existing vehicle architectures
- Patented and pending in five major automotive markets

Global Patent Portfolio

Collaboration Invitation

We are actively seeking OEM partners interested in integrating this innovative safety system into next-generation vehicle models.

With global demand for smart, connected safety solutions continuing to rise, this patented system provides a strategic opportunity to strengthen your safety portfolio, differentiate your brand, and align with evolving automotive safety standards.

We would be honored to arrange a brief meeting or provide detailed technical documentationfor your engineering team’s evaluation.

Thank you for your time and consideration.

We look forward to exploring a successful partnership with you.

Model No.: TWL-50/50 Naming Inspiration

“50/50” represents the first 50% of success already achieved — the product has been fully developed and patented across five major markets.

The remaining 50% lies in collaboration with you — our OEM partners. Only when this innovation is fully integrated into production vehicles and trusted by consumers on the road, can we truly call it a 100% success.

Patented Rear Window COB Warning Triangle System
Embedded within laminated glass with ultra-bright dual strobes.
Instant activation from inside the cabin — no need to exit during emergencies.
Provides maximum visibility and roadside safety up to 100 meters away.

Warm regards,

Stanley Kuo / CEO
